

Join the Revolution of HVAC System Optimization

Reduce Costs & Increase Comfort

With 51% or more of a building's energy consumption originating from the HVAC system requirements, it is no wonder that advanced building automation systems are becoming the norm. Increased energy costs highlight the need for the HVAC system to run at the Optimum Performance Level. BuildingLogiX is proud to be the brand of choice—providing unprecedented control of your building's HVAC system with user-friendly web-based applications—delivering the future of building automation.

An Intuitively Smart HVAC System

In recent years, advanced applications have become the industry standard in just about every part of our daily lives. Yet the HVAC industry has been traditionally slow in accepting change from the traditional complexity of proprietary systems. Without a doubt, this is directly due to the high sophistication that HVAC systems can quickly morph into when meeting the dynamic needs of a facility. Armed with experience and precise understanding of how powerful HVAC systems can become, Building LogiX delivers premier intuitive web-based applications.

Effectively Managing a HVAC System via the BuildingLogiX brand:

Ability to Anticipate changes in building loads through comprehensive software applications

Accurately anticipating load changes through strategic scheduling helps eliminate wasteful spending and unwanted surprises in expenses

Controlling the entire BAS system through precise adjustments at the Component-level

Due to many different protocols, most BAS systems are limited on what specific devices can be controlled. Since BuildingLogiX applications were developed with many protocols in mind, the entire BAS System is much more dynamic.

HVAC

System Optimization

Risk & Consequences from Poor Performance

When a HVAC system performs poorly in a building, a significant loss of building efficiency is the result. Indoor air quality can suffer and lead to deterioration of occupant health. Also an overworked system lowers the life expectancy of the system and dramatically increasing repair costs!

About BuildingLogiX

The BuildingLogiX system of products have been enhanced with web technology to provide innovative solutions to take your organization to the next level. BuildingLogiX connects a building's costly requirements of HVAC, lighting, energy management, security etc., along with the desired increases in comfort, customer perception, and productivity into one system that increases the power and effectiveness of allocating financial resources. To learn more on how the BuildingLogiX suite of products can benefit you please call 1-888-425-6449 or contact your local Building LogiX partner today!

Simply Logical: BuildingLogiX

Understanding a building intuitively requires extracting the available data into simple and useful information that can determine what actions to take to improve efficiency and productivity for any type of building.

BuildingLogiX has developed a system of applications that help increase building efficiency through smart applications. Now a building manager has the user friendly tools to proactively and decisively adjust the building's controls for enhanced performance. These complex adjustments were once accepted as desirable yet unrealistic, and now help maximize the ROI of your BuildingLogiX BAS/HVAC system!
