# TrendView

TrendView is a powerful data point warehousing engine designed on the Niagara framework. With TrendView you are able to record every building system data point every minute for the next 10 years.

TrendView allows the user to create custom views of any building system data as well thru a simple drag a drop feature. Compare any set of points at any time thru our easy set up matrix.

By being able to record everything all the time you won't miss critical information.

- Find critical information about your building in real time.
- See cause and effect for energy savings and system performance
- Diagnose the cause of a system or equipment failure, not just fix what is broken
- Easy to use Wizard setup utility
- Web Enabled
- Intuitive Graphical Layout
- Compare multiple buildings system performance
- View any point, anytime, anywhere
- Niagara AX Based Application

About BuildingLogiX

Reduced Operational Costs, Improved Building Comfort & Performance, along with integration and expansion of Enterprise Control are among the many benefits provided by BuildingLogiX.BuildingLogiX is a system of hardware, software applications and services that deliver consistent performance to commercial building owners throughout the United States. Our exclusive network of BuildingLogiX partners provide the system and wrap it together with industry leading service and contracting capabilities.
